Illuminati Assembly Instructions

There are 11 separate pieces to your new Illuminati Lightbox (see "Illuminati Parts" photo):

- 4 slotted panels with vellum
- 1 base with 4 rubber feet, a circular LED light support, 10" long light strip connected to 5 volt USB LED controller
- 4 wooden pegs to connect panels to base
- 1 lid with knob
- 1 17 key RF wireless remote (takes CR2025 battery, included)

Illuminati Parts

Panels are slotted to fit together, 2 with the slots on the bottom, 2 with the slots at the top. *Gently* slide panels together as shown below with vellum on the inside. They fit snugly so if they don't seem to fit in one configuration, switch panels around.

Panel assembly #1

Panel assembly #2

Panel assembly #3

Once the panels are fitted together, fit frame over base and insert wooden pegs through panel into hole in base on each side. Insert each peg halfway until all 4 are fitted in, then push all 4 in the rest of the way. And once again, they will fit very snugly so if they don't seem to be going in properly, turn the base $\frac{1}{4}$ turn, fit frame over base, and try again!

Base assembly #1

Base assembly #2

Turn Illuminati upright and position the lid so the bottom piece nestles into the top of the frame.

Lid fitting #1

Lid fitting #2

Make sure your LED controller has stayed connected to the LED light strip piece via the male-to-male 4-pin connector. Carefully plug the pins back in if it came apart.

LED controller parts #1

LED controller parts #2

NOTE: the LED controller has each pin marked so that you can correctly connect to the light strip. You will see the 'r' 'g' 'b', and the 4th pin is marked

with a small red diamond – that's for the black power wire, and it needs to connect to the pin on the LED strip with the tiny black raised arrow.

Plug USB into a power source and press upper left red power button on your wireless remote to turn on lights (note: remote must be in line of sight to the LED controller to connect). If you had to reconnect the controller to the lights and the lights don't turn on, try unpinning, flipping the controller over, and plugging back in.

17Key RF Remote

The remote takes a CR2025 coin battery, which has been included.

The enclosed RF Wireless Remote instruction booklet should take care of any questions you may have about how each button works, and it also tells you how to pair the remote if necessary – email us at support@centuryartisans.com if you have any questions.

Enjoy!
